Quality, Environment & Safety

Our management-system commitments

Protrafo is committed to delivering safe, reliable transformers with a minimal environmental footprint. This statement summarises the management-system standards that govern how we design, build, test and service every unit.

ISO 9001 — Quality Management

Our quality management system governs design control, supplier qualification, production and final testing. Every transformer is manufactured to a controlled process and released only after passing its IEC 60076 routine tests, ensuring consistent quality on every unit we ship.

ISO 14001 — Environmental Management

We manage and continually reduce the environmental impact of our operations and products. Low-loss designs meeting EU EcoDesign Tier 2, ester-fluid options and responsible material sourcing reduce lifetime energy losses and contamination risk across the fleet.

VCA — Safety, Health & Environment

Our on-site installation and service activities are carried out under a VCA-aligned safety, health and environment regime, protecting personnel and assets during delivery, installation, commissioning and maintenance work across Europe.

This is a branded statement of Protrafo's commitments. Official third-party certificates and current test reports are available on request from info@protrafo.com.
